

BUFFALO RIDGE RUNNER

THE EASY WAY TO GIVE YOUR PLANTER BUFFALO PERFORMANCE.

» Buffalo »

THE BUFFALO RIDGE RUNNER. . .THE ECONOMICAL WAY TO SWITCH TO RIDGE TILL

If you want to cut your input costs, there's no better way than switching to ridge till. Ridge till can save as much as \$25 an acre on fuel, chemicals and fertilizer, while still producing equal or better yields. You'll also save time, freeing you to diversify or manage other aspects of your operation.

With the Buffalo Ridge Runner, even making the switch can be economical. The Ridge Runner maximizes the investment you already have in your conventional planter with few modifications. The cost is so small, your ridge till savings will pay for your Ridge Runner in as little as one year.

The Ridge Runner was born out of 30 years of innovation and leadership. No one can match Fleischer's ridge-till experience, so no one can give you better results. You'll plant 7 to 10 days earlier with Buffalo ridge till, even in heavier residue. Our quick, positive adjustments and long-lasting quality will keep your investment paying off for years.

Best of all, it fits most conventional planters from John Deere, Case-IH, White, New Idea and Kinze. Ask your Buffalo dealer. Chances are, there's one made for your planter.

Maximum performance at minimum cost.

The Ridge Runner doesn't just fit your planter—it becomes an integral part of it. We custom-design attachments for different planter models to

complement the strengths of each. You'll get the most from what you already have, plus the extra productivity of ridge till.

Heavy-duty down-pressure springs combine with the strongest parallel linkage available to give you positive control on uneven terrain. The linkage allows maximum residue flow, thanks to the best clearance of any attachment.

You'll hold sidehills better while cutting a path through heavy residue with the front coulter and optional residue clippers.

Sweeps or disk row cleaners clear the ridge, exposing warm, moist mellow soil for optimum germination. The residue is pushed into the furrow to help retain moisture.

With the fully-adjustable liquid fertilizer knife, you can apply fertilizer at consistent depth while planting.

The Ridge Runner Steering Bar model for pull-type planters will also improve planter maneuverability. The two-point pivot hitch allows sharper turns on end rows and improved vertical and horizontal movement with less twisting and binding of the planter.

The Ridge Runner Steering Bar quickly matches with most 4, 6 and 8 row 30" late model pull-type planters. Two other models offer even greater flexibility, and can be used on any system 12 rows or under. The Ridge Runner is built to let any planter perform at its best, while giving you all the convenience and economy of ridge till.

Precise adjustments for the best results.

You've never owned an implement that gives you precise adjustments as easily as the Ridge Runner. Screw jacks are used in place of the pins and cranks the competition offers. You'll get more accurate adjustments for sweep depth in less time.

Maintaining the Ridge Runner is just as easy as operating it. We design our

equipment to let you take care of minor adjustments in the field instead of the shop. The Ridge Runner is ready to go to work faster than the competition, so you'll get done sooner.

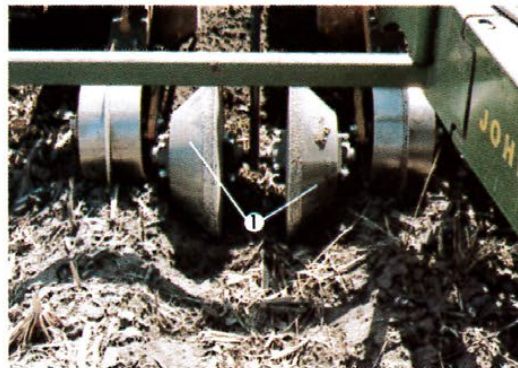

Different needs, different models

The Ridge Runner comes in three different models with a wide range of

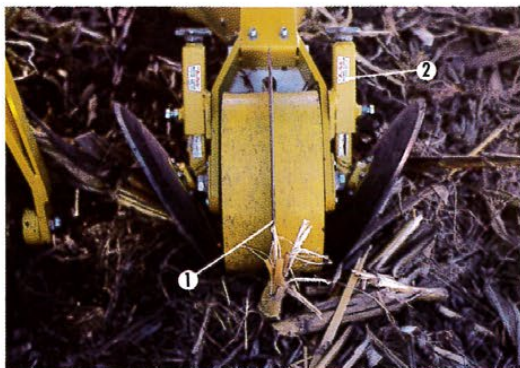

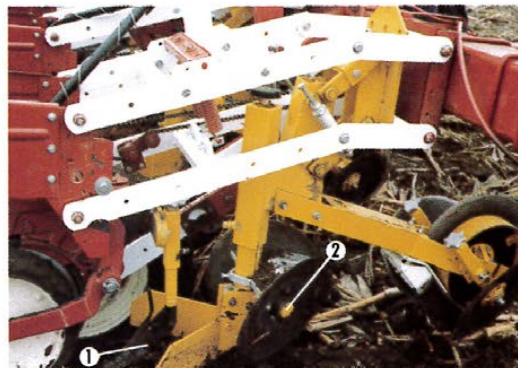

1. Hydraulic lift kit raises row units for conventional planting, wet conditions and end rows.

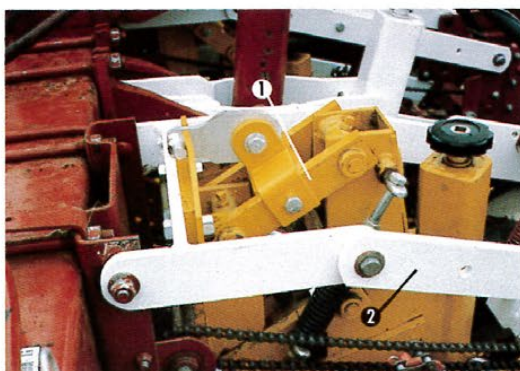

1. Hip huggers offer passive guidance to hold planter securely on top of ridge.

1. Coulter improves stability, combines with optional residue clippers to triple-cut heavy residue.
2. Residue Clippers adjust quickly and precisely with screw jacks instead of set bolts.

1. Liquid fertilizer knife with easy adjustment knob lets you precisely apply fertilizer. You can apply fertilizer with the seed, in the row, 2" to the side, or 2" below the row.
2. Easily-interchangeable slot shoes.

1. Manual flip-over row lock-up latch lets you lock individual units up and out of the way for conventional fields or end rows.
2. Parallel linkage equipped with twin down-pressure springs ensure precision row cleaning and a smooth seedbed.

1. Fits most late-model planters.
2. Residue guards are adjustable to allow for maximum residue and soil flow in any conditions.

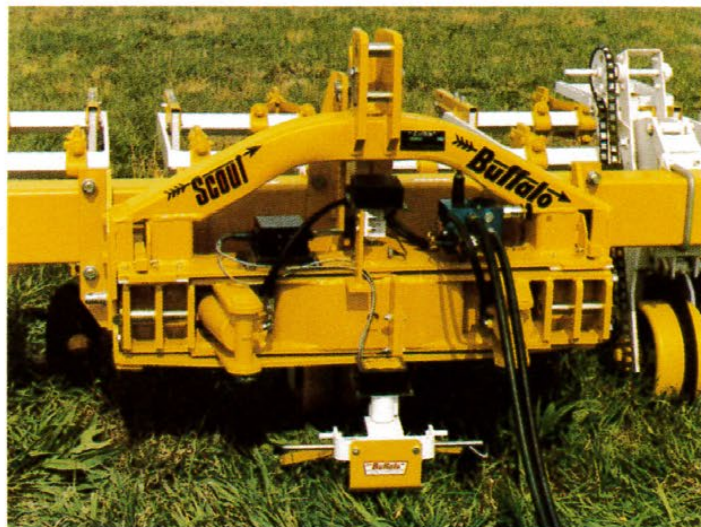

The complete family of Buffalo-tough equipment.

Every Buffalo product is backed by 30 years of experience. We field test on thousands of acres with farmers and in land grant universities nationwide. You can put that experience to work for you with the full line of Buffalo equipment.

BUFFALO 6300 CULTIVATOR

Built tough for ridge till/no till, so it's the high-performance choice for any tillage system.

BUFFALO SCOUT GUIDANCE SYSTEM

The ultimate guidance system for high-performance planting and cultivation.

- Greater precision reduces cultivator blight, while working closer to the crop row than ever before
- Takes the stress out of cultivating, even at night
- Adjusts instantaneously, even at speeds up to 10 mph
