

# THE REBOUNDER®

**T**he Rebounder is designed to give you **consistent seed placement** and **accurate depth control**, leading to **improved germination** and **consistent emergence**. Uneven seed spacing and inconsistent depth placement are two of the top contributors to decreased yields.

For most planters the Rebounder is attached to the seed tube. It runs 1/4" (for shallower planted seeds) to 3/8" off the bottom of the furrow. **The Rebounder is designed to work with the seed tube, not against it, serving as a stabilizer that keeps the seed tube in the center of the furrow.**

The Rebounder moves up and down with the planter to funnel the seed to the bottom of the seed V, also ensuring that it will eliminate seed bounce, uneven spacing, and seeds flipped on top of the soil.

*The Rebounder maintains consistent depth placement, generating higher yields through healthier plants. Without the Rebounder, inconsistent depth placement occurs with seeds landing 3/4" to 1-3/4" deep. Shallow planted seeds can cause poor root structure and reduced yields.*

# THE REBOUNDER®

## ELIMINATES COMMON PROBLEMS

- ▶ Rebounder will not build up with mud
- ▶ Will not leave seeds lodged or pressed into sidewalls
- ▶ Will not bunch seeds

## BENEFITS OF THE REBOUNDER

- ▶ Smooth concave design keeps the seed covered in the furrow and prevents seed bounce
- ▶ Built-in neck flex allows for flexibility of the Rebounder in all soils
- ▶ Upside down spoon shaped design forms to the seed V
- ▶ Unique half moon tip prevents seed drag
- ▶ Rebounder improves germination and consistent emergence

You only have  
**1 chance to  
get it right!**

Planted with  
firming attachments  
Inconsistent seed spacing  
Uneven emergence

Planted with  
Rebounders  
Consistent seed spacing  
Uniform emergence

**K.F., IL**

*With the competitor's brand on I would find seeds pressed into the side walls of the furrow. Then I switched to the Rebounders and now I find all seeds in the bottom of the furrow.*
